

# Data Science Hero's Journey

## Overview:

In this assignment, you will reflect on your journey in data science by applying the **Hero's Journey framework** alongside **Intentional Change Theory (ICT)**, the **Cynefin framework**, and **Chain of Thought reasoning**. You will identify key moments of transformation, decision-making, and personal growth. The final deliverable will be a **2-minute recorded video** where you present your Data Science

### 1. The Ordinary World - Starting Point

- Objective:** Define where you were before starting your data science journey.
- Task:** Write a brief description of your life before data science.
- Guiding Questions:**
- What was your background (academic, professional, personal)?
  - What did you think data science was before you started?
  - Did you have any misconceptions or doubts?
- Example:**

### 5. The Abyss - Facing an Existential or Ethical Crisis

- Objective:** Reflect on a time when you questioned your path or faced an ethical dilemma.
- Task:** Identify a moment when you seriously doubted yourself or encountered an ethical issue in data science.
- Guiding Questions:**
- Did you experience impostor syndrome? How did you overcome it?
  - Have you encountered an ethical problem in AI, machine learning, or data analysis?
- Example:**
- ICT Connection:** How did this crisis redefine your personal and professional goals?
- Cynefin Connection:** Did the problem seem chaotic at first? How did you bring it to a manageable level?

### 2. The Call to Adventure - Why Did You Start in Data Science?

- Objective:** Identify the moment you decided to enter the field.
- Task:** Describe what sparked your interest in data science.
- Guiding Questions:**
- Was there a defining moment or event that made you take data science seriously?
  - Did a person, course, or real-world event inspire you?
  - What were your initial goals?
- Example:**
- ICT Connection:** What was your **Ideal Self vs. Real Self** at this moment?
- Cynefin Connection:** Did this decision feel **Obvious, Complicated, Complex, or Chaotic**?

### 6. The Transformation - Emerging with New Skills and Knowledge

- Objective:** Describe how you overcame challenges and transformed your approach to data science.
- Task:** Identify how you changed after experiencing obstacles.
- Guiding Questions:**
- What major technical or mindset shift did you experience?
  - How did your approach to problem-solving evolve?
  - What skills or habits do you now rely on that you didn't before?
- Example:**
- ICT Connection:** How has your **Real Self** evolved **closer to your Ideal Self**?

### 3. Crossing the Threshold - Your First Major Challenge

- Objective:** Describe a pivotal moment where you faced a major challenge.
- Task:** Reflect on the first significant roadblock you encountered.
- Guiding Questions:**
- What was the first time you seriously struggled with a data science concept or tool?
  - Did you consider giving up? How did you push through?
  - Who or what helped you move forward?
- Example:**
- ICT Connection:** How did this challenge force you to change your learning approach?
- Cynefin Connection:** Did you **misclassify** the problem as more complex than you expected?

### 7. The Future - Applying Knowledge for the Future

- Objective:** Define your future trajectory in data science and how you will apply what you've learned.
- Task:** Create a roadmap for your next steps in data science.
- Guiding Questions:**
- What challenges do you anticipate in the future?
  - How will you use your past experiences to navigate new obstacles?
  - What is your next major goal in data science?
- Example:**
- ICT Connection:** Identify what **sustained change** means for you.
- Cynefin Connection:** How will you apply your understanding of complexity to future problems?
- Chain of Thought:** Create a **goal-oriented reasoning path** for your next learning steps.

### 4. Tests, Allies, and Enemies - Learning Under Uncertainty

- Objective:** Explore how you navigated uncertainty and the role of allies and obstacles.
- Task:** Identify a time when you had to deal with messy data, misleading insights, or team collaboration challenges.
- Guiding Questions:**
- How did you handle a real-world dataset?
  - Who or what acted as an "ally" (mentors, books, courses, communities)?
  - Who or what acted as an "enemy" (bias in data, poor documentation, misleading results)?
- Example:**
- Cynefin Connection:** Was the challenge **Complicated or Complex**?

### Final Deliverable: 2-Minute Reflection Video

- After completing the written reflection, record a **2-minute video** summarizing your Data Science Hero's Journey. Your video should:
- Highlight key moments from each stage.
  - Explain how **ICT, Cynefin, and Chain of Thought** influenced your decision-making.
  - Conclude with how you plan to continue your journey in data science.

**Submission Format:** Upload both your written reflection and video.

## Overview:

In this assignment, you will reflect on your journey in data science by applying the **Hero's Journey framework** alongside **Intentional Change Theory (ICT)**, the **Cynefin framework**, and **Chain of Thought reasoning**. You will identify key moments of transformation, decision-making, and personal growth. The final deliverable will be a **2-minute recorded video** where you present your Data Science

### 1. The Ordinary World - Starting Point

Como estudiante, mi mundo giraba en torno a clases teóricas y proyectos académicos. Veía la carrera de datos como análisis estadísticos avanzados sin comprender el potencial ni la complejidad.

- ICT: Yo Real vs Yo Ideal
  - Tenía conocimientos teóricos; aspiraba a diseñar arquitecturas que tuvieran impacto real.
- Cynefin: Simple
  - Requería experimentación para entender el alma de lo que podía lograr.
- CoT:
  - Sobre la práctica y la exposición a casos reales me permitirían cerrar esa brecha.

### 2. The Call to Adventure - Why Did You Start in Data Science?

En junio 2023, uno de mis profesores profesores me ofreció un puesto en su empresa, desde ahí mi curiosidad académica se volvió vocación profesional. Aquí fue que supe que a diseñar soluciones mucho más entendidas y útiles.

- ICT: Yo Real vs Yo Ideal
  - Me di cuenta que necesitaba pasar de la teoría a algo práctico y profesional.
- Cynefin: Simple
  - Enarmonaba técnica pero amaba el arte de aprender.
- CoT: Entender Pasos a seguir
  - Comparar servicios Cloud
  - Validar modelos
  - Prototipar modelos

### 3. Crossing the Threshold - Your First Major Challenge

Mi primer reto fue entender requisitos de negocio y transformarlo en soluciones/aplicaciones/plataformas viables. Así comencé a salir de la teoría y entender y aplicar cosas que desconocía.

- ICT:
  - Redefinir hábitos de aprendizaje y más proyectos hands-on.
- Cynefin: Simple → Complejo
  - Lo que parecían ser soluciones conocidas, requirieron iteración constante y feedback de usuarios.
- CoT: Ciclo Iterativo
  - Diseñar
  - Medir
  - Probar
  - Ajustar

### 4. Tests, Allies, and Enemies - Learning Under Uncertainty

Cuando empecé a construir pipelines más robustos para desafíos más grandes, enfrenté requisitos cambiantes y limitaciones de escalabilidad principalmente. Mis aliados fueron 3 de mis compañeros de la escuela, que ahora trabajan conmigo y un arquitecto que recién se incorporó al equipo. Mis enemigos fueron la monotonía en los datos del cliente, la falta de documentación de los procesos y los cuellos de botella en el rendimiento.

- ICT: Estaba tomando muchos cursos para acercarme al Yo Real al Ideal.
- Cynefin: Complejo. Requería análisis para diseñar flujos robustos.
- CoT: Descomponer los problemas en subtemas y abordar cada uno con soluciones específicas.

### 5. The Abyss - Facing an Existential or Ethical Crisis

Al liderar equipos multidisciplinarios pasé por el síndrome del impostor: duda de mis capacidades para guiar a un equipo tan grande y tan variado.

- ICT: redefinir roles, compromiso de formación continua (MCD)
- Cynefin: Caótico: presión, falta de precedentes, toma de decisiones compleja.
- CoT: Identificar impacto, investigación de buenas prácticas, diseñar resiliencia, capacitaciones con equipo.

### 6. The Transformation - Emerging with New Skills and Knowledge

Después, desarrollé la habilidad de traducir conceptos complejos en valor de negocio, así como acelerar estrategias organizacionales.

- ICT: Mi yo real ahora tenía mucho más liderazgo, comunicación, innovación.
- Cynefin: Complejo: análisis, visión estratégica
- CoT: Entrega sistemática
  - Mapear
  - Ejecutar
  - Alinear

### 7. The Return with the Elixir - Applying Knowledge for the Future

En un futuro me veo terminando la maestría, liderando proyectos de Data Science. Manteniendo una rápida evolución y aprendizaje constante para seguir los avances.

- ICT: aprendizaje permanente
- Cynefin: Problemas complejos variables, pero con patrones similares
- CoT:
  - Identificar tendencias
  - Probar hipótesis
  - Evaluar aptitud
  - Escalar valor

### Final Deliverable - 2-Minute Reflection Video

After completing the written reflection, record a **2-minute video** summarizing your Data Science Hero's Journey. Your video should:

- Highlight key moments from each stage.
- Explain how **ICT**, **Cynefin**, and **Chain of Thought** influenced your decision-making.
- Conclude with how you plan to continue your journey in data science.

**Submission Format:** Upload both your written reflection and video.
